H₂S Clear for Energy

Hydrogen Sulfide (H₂S), sour gas, can instantly disable and kill an untrained worker within seconds. Protect your workers from H2S exposure and ensure safety and regulatory training compliance with H₂S Clear for Energy.

PEC H2S Clear for Energy is the leading industry-recognized training program on the deadly threat of hydrogen sulfide (H2S). It is a comprehensive, instructor-led, 4-hour course that arms workers with all the crucial information and processes specific to working in potentially deadly H2S environments.

Features and Benefits

Standardized Training

Teaches workers how to recognize the dangers of hydrogen sulfide and its sources, how to react when exposed, methods of detection, monitoring and protection, as well as rescue techniques, post-exposure evaluation and life support systems.

Regulations & Requirements

H2S Clear meets the revised standards set forth in the ANSI/ASSE Z390.1—2017, as well as includes regulations and requirements set forth by OSHA, API, Bureau of Safety & Environmental (BSEE), Environmental Protection Agency (EPA), Railroad Commission of Texas and various other regulatory agencies.

Network of Instructors

Our network of over 2,500 instructors span across the US and are available coast-to-coast to deliver training.

Testing & Certification

Instructor led interactive training and proctored testing confirms knowledge retention and live worker identification.

Training Records & Accessibility

Individual worker training records are entered and stored in the Veriforce database. Both physical and digital training badges are available for work verification.

Mobile Verification

Our mobile scanning system quickly verifies workers have completed their H2S training along with other site requirements as they enter the site.
